

Are you a caregiver to an Acute Myeloid Leukaemia (AML) or Myelodysplastic Syndromes (MDS) patient?

Could you take part in research to improve access to Stem Cell Transplants (SCT)?

What is the study about?

We want to understand the experience of caregivers who are supporting an AML or MDS patient through their diagnosis and treatment.

Who is eligible?

An individual, aged 18 or above who has an active role in supporting an AML or MDS patient through their treatment

What is involved?

- Translators and interpreters will be provided, if required
- Talking to a researcher about your experiences online, by phone, or face-to-face
- Taking part will not affect your treatment and care or the person you care for
- A £25 shopping voucher will be offered to participants as a thank you

What happens after?

After the study, the researchers will work together with patient groups and professionals to identify how access to SCT could be improved.
