

Are you involved in the treatment of patients with Acute Myeloid Leukaemia (AML) or Myelodysplastic Syndrome (MDS)

Could you take part in research to improve access to Stem Cell Transplants (SCT)?

What is the study about?

This study will explore the experience of healthcare professionals who treat AML and MDS patients. This is a multicentre study sponsored by the University of Birmingham in collaboration with NHS Blood and Transplant and funded by the National Institute of Health Research.

Who is eligible?

Healthcare professionals (HCPs) involved in the treatment and care of AML or MDS patients

What is involved?

- Talking to a researcher about your experiences online, by phone, or face-to-face
- A £25 shopping voucher will be offered to participants as a thank you

What happens after?

After the study, the researchers will collaborate with patient groups and professionals to identify how access to SCT could be improved.
